

Data Sheet

Floor pads of steel wool :

Floor pads can be used with most disc-type floor machines for stripping, buffing, dry scrubbing, polishing or finishing parquet floors, linoleum floors, stone floors, etc. They are suitable for crystallizing marble. Floor pads cling easily to the fiber brush or other adapters on most machines. Renovation and cleaning get easy and give back a brilliant luster to floors. The standard types of floor pads ("normal" and "stainless") are made of rolled up steel wool, being compressed and welded together. The "high-speed" type, only available in "stainless", is reinforced with a synthetic fiber to stand on high-speed machines and has only one working side. Floor pads in stainless steel wool last longer and avoid rust problems when working with water based products.

Typical applications for the available grades :

Grade 00:
cleaning, polishing and finishing floors

Grades 0 + 1:
cleaning and dry scrubbing

Grade 2:
stripping wax floors, scrubbing rough floors, removing paint and varnish, smoothing and buffing wood floors, ideal for crystallizing marble
